Summary

Software and Cloud Engineer with experience designing cloud-native infrastructure, automating deployments, building CI/CD pipelines, and deploying containerized applications on AWS and cloud environments. Strong foundation in Linux administration, Infrastructure as Code, cloud networking, and platform reliability.

Experience

Freelance Software & Cloud Engineer

January 2026 – Present

- Develop full-stack web applications and backend services for client projects using modern JavaScript frameworks.
- Design RESTful APIs, database schemas, and scalable application workflows.
- Work with cloud-based deployment environments and version control systems to deliver reliable software solutions.
- Support AI-related initiatives through data validation, workflow optimization, and quality assurance processes.
- Collaborate directly with stakeholders to translate business requirements into technical solutions.
- Annotated and validated unstructured datasets used in AI/ML model training.

Software Engineer

July 2025 – December 2025

OwnKey

- Collaborated cross-functionally with backend, QA, and operations teams in Agile sprints, to deliver scalable, production-ready features.
- Optimized REST API data flows and frontend performance through caching and responsive UI improvements, reducing load times and improving UX consistency.
- Developed and launched key product features (video shorts, interactive listings), increasing average session duration by 25% and improving user engagement.

Software Engineer

October 2024 – February 2025

Solar Taxi

- Created high-fidelity Figma prototypes for key user flows, reducing frontend development time by 50% by eliminating ambiguity and improving design clarity.
- Designed responsive interfaces and improved frontend efficiency, reducing development time by 50%.
- Contributed to product design and usability improvements to enhance user interaction and adoption.

IT Officer

May 2024 – July 2024

Ministry of Environment, Science, Technology and Innovation

- Resolved technical issues and improved system performance, reducing resolution time by 40%.
- Provided technical support across enterprise hardware, software, networking, and productivity systems.
- Supported IT documentation, reporting, and compliance-related activities.
- Performed organization-wide IT audits assessing system performance, asset utilization, and compliance standards.

IT Support / Systems Administration

August 2023 – April 2024

Ghana Commodity Exchange

- Managed and optimized internal systems to ensure reliability and operational efficiency.
- Automated administrative workflows, reducing downtime and improving system performance.
- Managed user onboarding activities including workstation deployment, access provisioning, and account configuration.
- Analyzed large datasets and built Power BI dashboards to support data-driven decision-making.

ICT/Computing Tutor

April 2020 – June 2025

Winners Family School

- Lectured ICT and Computing curriculum to high school students, covering computer literacy, programming fundamentals, and practical applications of technology.
- Designed and delivered lesson plans and hands-on exercises tailored to varying student skill levels, improving comprehension and engagement in technical topics.
- Prepared students for BECE ICT examinations, breaking down complex concepts into clear, practical, and exam-focused instruction.

- Mentored students on computing best practices and problem-solving, fostering interest in technology and further studies in the field.

Project Experience

AI Customer Service Agent | [\(Live Demo\)](#)

March 2026

- Designed and developed an AI-powered customer service assistant that provides intelligent, context-aware responses to customer inquiries using a Large Language Model (LLM).
- Built backend APIs to manage conversation flows, session context, and AI inference, enabling real-time interactions.
- Applied prompt engineering and response optimization techniques to improve accuracy, relevance, and consistency of generated responses.

AI Resume Analyzer | [\(Live Demo\)](#)

February 2026

- AI-powered application that analyzes resumes against job descriptions, generating match scores, skill gaps, and actionable recommendations using LLM APIs.
- Built a FastAPI backend to orchestrate LLM inference with structured JSON outputs ensuring reliable API responses.
- Applied prompt engineering techniques to enforce consistent, structured outputs suitable for production systems.

Text-Organizer – Linux Desktop Utility Tool | [\(GitHub Link\)](#)

January 2026

- Built a lightweight offline desktop application for text transformation workflows.
- Distributed as an AppImage for cross-distribution compatibility without installation.
- Orchestrated multiple execution paths and documented system-level constraints.

Text-to-Speech Application (AWS Polly, API Gateway, Lambda, CloudFront, S3) | [\(Live Demo\)](#)

September 2025

- Developed a scalable serverless application using AWS Polly, Lambda, API Gateway, S3, and CloudFront.
- Automated infrastructure deployment using Terraform, reducing deployment time by 95%.
- Designed IAM roles and least-privilege access policies for secure communication between AWS services.

Full Stack Application (AWS Amplify, AppSync, Lambda, DynamoDB) | [\(Live Demo\)](#)

August 2025

- Deployed a full-stack application via AWS Amplify, achieving an average deployment time of 70%.
- Implemented serverless authentication logic designed to scale to 10K+ users with Lambda and DynamoDB.
- Configured DynamoDB tables with on-demand capacity and partition key design to scale horizontally, supporting growth to millions of users and hundreds of GB of data.

Education

Master of Business Administration: Management Information Systems

February 2025

University of Ghana Business School

Accra, Ghana

Bachelor of Science: Information Technology

July 2021

University of Ghana

Accra, Ghana

Certifications

- AWS Certified Developer – Associate [\[Credential\]](#)
- AWS Solutions Architect Certification – Associate [\[Credential\]](#)
- Frontend Web Development, ALX Africa [\[Credential\]](#)
- AWS Knowledge: Cloud Essentials, Amazon Web Services (AWS) [\[Credential\]](#)
- Backend Web Development, ALX Africa [\[Credential\]](#)
- CC (Certified in Cybersecurity) - ISC2 [\[Credential\]](#)
- Project Management, Cambridge Center of Excellence [\[Credential\]](#)

Skills

- **CI/CD:** GitHub Actions, AWS CodePipeline, AWS CodeDeploy
- **Infrastructure as Code:** Terraform, CloudFormation
- **Programming:** Node.js, TypeScript, Python, Flutter.
- **Networking:** (TCP/IP, DNS, HTTP/HTTPS, TLS)
- **Tools:** Git/GitHub, GitHub Actions, CI/CD Pipelines
- **Version Control:** Git, GitHub
- **Containers & Orchestration:** Docker, Kubernetes
- **Monitoring & Observability:** AWS CloudWatch (Logs, Metrics, Alarms)
- **Systems & backend:** REST APIs, System Design, Distributed Systems
- **Operating Systems:** Linux Administration (Ubuntu), Bash Scripting
